

# Wyatt Jackson

Student

## OVERVIEW

Slightly experienced Linux administrator. Has played around with Linux and Windows systems administration as a hobby. Has a bit of experience with LDAP and Openid Connect for centralized authentication.

## EDUCATION AND CERTIFICATIONS

Athens Renaissance High School, 9th to 10th grade, 2021-2023.

## SKILLS

As a hobbyist, I have setup a FreeIPA server for LDAP and DNS, although I have not touch most of its features. I have installed several Linux distros on several systems, including Ubuntu, Mint, Arch, CentOS, and Rocky Linux. I have also used Debian via preconfigured images such as Raspberry Pi OS, as well as preconfigured Virtual Machines on cloud providers such as Digital Ocean and Azure.

I have used Docker and Docker Compose to build, configure, and run various containers. I have setup, configured, and modified VMs using Hyper-V, VirtualBox, and libvirt, using Virt-Manager and virsh. Guest systems include various Linux distros, as well as Windows Pro and Windows Server.

I have installed, configured, and used both Authentik and Keycloak for use as OpenID Connect providers, although I have more experience with Authentik. I have installed various apps, including Wordpress, Nextcloud, Grafana, Jellyfin, Gitlab, Gitea/Forgejo and more; configuring them to use either LDAP, OpenID Connect, or both as identity providers.

I have some experience using productivity suites, Including Microsoft Office, Google Apps, and LibreOffice. While I don't have much knowledge about any of them, I do understand how to use the basic functionality that they provide.

Outside of system administration, I also have some skills in Construction and Electrical, having helped my dad with several projects that make use of both fields. I have also helped repair a few cars, as well doing regular maintenance including Oil Changes and Tire Changes.
